Security Goals

Information Security (44 U.S. Code § 3542)

- " (1) The term "information security" means protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide—
 - (A) integrity, which means guarding against improper information modification or destruction, and includes ensuring information nonrepudiation and authenticity;
 - (B) confidentiality, which means preserving authorized restrictions on access and disclosure, including means for protecting personal privacy and proprietary information; and
 - (C) availability, which means ensuring timely and reliable access to and use of information.

Information Security Triad: CIA

- Protecting information from disclosure to unauthorized parties
- Access to information should be granted only on a need-to-know basis
- Data categorization according to the amount and type of possible damage should it fall into wrong hands

Supporting Principles ()

Authentication, Authorization, Encryption, Anonymity, Secrecy

- Protecting information from being modified by unauthorized parties
- Being correct or consistent with the intended state of information
- Ensuring that the **information is not tampered** whenever it travels from source to destination or even stored at rest

Supporting Principles (

Hashing, Digital Signatures, Non-repudiation, Tamper-evident packaging

- Ensuring that authorized parties are able to access information when needed
- Ensuring that the services of an organization are available

Supporting Principles (ATM)

Accessibility, Fault Tolerance, Redundancy, Backup, Testing

Exercise 2.1 (>)

1. Which security goals are at risk by the following threats?

Threat	C	A
Network Sniffing		
DDoS Attack		
Rogue WiFi Access Point		
Electromagnetic Pulse (EMP)		
Whistleblower		
Social Engineering		

Attacker Behavior vs. Security Goals

	Active	Passive	Threatened Security Goals
Observing	(🗸)	✓	Confidentiality
Altering	✓	×	Confidentiality, Integrity, Availability

Extended CIA Models

Parkerian Hexad (1998)

- Confidentiality
- Possession / Control (NEW)
- Integrity
- Authenticity (NEW)
- Availability
- Utility (NEW)

- Protecting against the idea that confidential data can be possessed/controlled by an unauthorized individual or party
- Loss of control or possession of information should not automatically lead to the breach of confidentiality

Supporting Principles (1998)

• Encryption, Authentication

 Assurance that a message or transaction is from the source it claims to be from

Supporting Principles ()

Identification, Digital Certificates

• Usefulness of data or information

Compatibility, Accessibility

"Information may be available and therefore usable but it doesn't necessarily have to be in a useful form to be defined as available.

[^1]

"

CIA³ (2016)

- Confidentiality
- Integrity
- Availability
- Accountability (NEW)
- Assurance (NEW)

- Allowing to answer questions like "Who did it?" or "Who is accountable?"
- Considering legal consequences and contractual obligations
- Encompassing segregation of duties and awareness training

 Integrity, Non-repudiation, Authenticity, Design, Governance, Policy

- Introduces control activities for the aforementioned security goals
- Periodic controls assuring that all security measures (both technical and operational) work as intended

Supporting Principles (III 74)

Auditing, Measuring, Monitoring, Continuous Improvement

Dependency Model of CIA³

Exercise 2.2 (>)

1. Define at least three supporting measures for each CIA³ security goal, distinguishing between technical and organizational measures

Security Goal	Technical Measures	Organizational Measures
Confidentiality		
Integrity		
Availability		
Accountability		
Assurance		

Exercise 2.3 (<u><u>û</u>)</u>

- 1. Which of the "classic" CIA security goals could have been compromised in each of the Motivation: Case Studies?
- 2. Explain each ✓ briefly

Case Study	C	1	A
<u>Aadhaar</u>			
<u>Equifax</u>			
<u>VTech</u>			
CloudPets
